Clean water on the line in Colorado

Court suspends protections we helped win

For more than a decade, loopholes in the Clean Water Act left many of the rivers and streams we love and rely on in Colorado and across the country vulnerable to pollution.

More than 800,000 of you took action with Environment Colorado to close these loopholes in the Clean Water Act—and President Obama’s Clean Water Rule released in August did just that, restoring protections to 73,000 miles of Colorado streams and the drinking water sources for 1 in 3 Americans.

But now, the historic clean water protections that you helped win have been suspended nationwide, and could be overturned, due to lawsuits brought by polluters and supported by Colorado Attorney General Cynthia Coffman and more than 20 others across the country.

Polluters attack rule in court

Within hours of the Clean Water Rule coming out in September, the Environmental Protection Agency (EPA) was hit with a flood of lawsuits from giant corporate polluters, who were joined within weeks by state attorneys general. A U.S. Appeals Court suspended the rule nationwide in October, and may vote to overturn it.

“For more than a decade, the courts left thousands of our streams and wetlands in a precarious legal limbo, vulnerable to pollution and development,” said John Rumpler, senior attorney for Environment Colorado. “Now they’ve done it again.”

Your support helps us respond

We can’t allow our country to go backwards on clean water. So in 2016, we’re doubling down on our efforts to protect this critical ruling.

With you behind us, Environment Colorado will urge undecided attorneys general to intervene on the right side of the litigation. We’re also organizing legal scholars to speak up about the legal soundness of the Clean Water Rule. At the same time, we’re keeping the pressure on our leaders in Congress to beat back polluters’ attempts to pass legislation weakening the rule.

Most importantly, you’re helping us keep the debate focused on what this issue is really about: clean water for our families.

Algae blooms, like this one on Lake Erie, are worsened by runoff pollution in streams.

We need your help to move forward on clean water. Take action online to urge our attorneys general to stand up for the Clean Water Rule:

Environment Colorado staff held an event at Horsetooth Reservoir near Fort Collins to bring visibility to the need to protect the waters we love in Colorado.
We won! President Obama rejects Keystone XL

Your support won a monumental victory this November when President Obama rejected the construction of the Keystone XL pipeline—a pipeline designed to transport tar sands from Canada across the United States. Together, Environment Colorado and our members fought alongside our allies for years against this project, which State Department officials estimated would produce 26 million metric tons of carbon pollution each year—the equivalent of 5.7 million cars.

“The Keystone XL pipeline would slam the accelerator on global warming, so we’re thrilled that President Obama is applying the brakes,” said Anna Aurilio, director of our Global Warming Solutions program. “The victory belongs to all the Americans who have been fighting for years for their water, their communities, and their kids’ future, and it’s a crucial step toward the 100 percent clean energy future the climate crisis demands.”

How we’re defending the Clean Power Plan

Across Colorado, you’ve shared with us the effects you’ve felt from global warming—from reduced snowpack to the mountain pine beetle epidemic harming our forests. And this fall, your support helped Environment Colorado continue our work to ensure the success of the Clean Power Plan, which sets the first-ever limits on America’s largest source of global warming pollution—dirty power plants.

The Clean Power Plan is crucial to America’s ability to effectively solve global warming and sets a precedent for other world leaders to do their part to address this urgent challenge. Thanks to Colorado’s clean energy leadership, our state is on track to hit the bold targets set by the Clean Power Plan—but the plan is a floor, not a ceiling.

Unfortunately, the fossil fuel industry and their allies in Washington are determined to block this meaningful action. So Environment Colorado is holding visibility events and going door-to-door to educate folks about what’s at stake. Members like you are playing a key role in calling on our representatives in Congress to stand up for the plan.

Members from our door-to-door outreach team held a “Beat the Heat” rally in Denver to demonstrate public support for the Clean Power Plan.
Solar energy is booming across the country. In just the last three years, America's solar photovoltaic capacity tripled, largely driven by just 10 states, according to recent research by Environment Colorado Research & Policy Center.

Yet, as solar grows and generates increasing amounts of clean energy at increasingly affordable prices, electric utilities, fossil fuel interests and powerful industry front groups have begun chipping away at the key policies that have put solar energy on the map in the United States—often in the face of strong objections from a supportive public.

**Leading states have strong policies**

Environment Colorado Research & Policy Center's annual report “Lighting the Way,” released for the third time in September, found that solar's recent and growing success is due not to the nation's solar potential but rather to policies that have allowed increasing numbers of homeowners, businesses, communities and utilities to “go solar.”

Of the top 10 states in the report for solar capacity per capita—Hawaii, Arizona, Nevada, California, New Jersey, New Mexico, Vermont, Massachusetts, North Carolina and Colorado—all have renewable energy requirements and nine have laws that allow solar customers to connect to the electrical grid, or earn credit for excess electricity sent back to the grid. These 10 states are responsible for 86 percent of today's solar electricity capacity.

**Special interests stand in the way**

The continued success of solar power, however, has been threatened by recent attacks on key solar policies. Environment Colorado Research & Policy Center’s report, “Blocking the Sun,” released in October, documented 12 fossil-fuel-backed groups and electric utilities that are running some of the most aggressive campaigns to slow the growth of solar energy in the United States.

These campaigns are often waged in the dark, with industry-funded think tanks providing model legislation and political cover that allow in-state electric utilities to attack key solar energy policies.

In mid-2015, at least 21 states had either ongoing or recently resolved proceedings around policies to slow the growth of solar energy.

“By wide margins, Americans support pro-solar policies,” said Bret Fanshaw, Environment Colorado Research & Policy Center solar program coordinator. “That’s why fossil fuel interests and their front groups have resorted to shady and deceptive tactics to undermine them. Ultimately, it’s up to state leaders to reject these attacks and support a clean energy future.”

Our research recommends that state decision-makers resist utility and fossil fuel industry influence by rejecting policies that place restrictions or tariffs on solar or rollback renewable electricity standards. In addition, state leaders can do more to encourage solar energy's growth by embracing ambitious goals for solar energy and adopting policies that will help meet them.

How you can help save the bees

Millions of bees are dying off with alarming consequences for our environment and our food supply. We rely on bees to pollinate major crops, from almonds to strawberries to the alfalfa used to feed dairy cows. No bees means no food.

This fall, you helped Environment Colorado launch our grassroots efforts to protect our pollinators from this threat, making it possible for us to canvass on the street and go door-to-door to educate people about what’s at stake. Scientists point to several causes behind the die-off, including a class of pesticides known as neonicotinoids, which are toxic to bees. We need your continued help to convince the Environmental Protection Agency to declare a moratorium on bee-killing pesticides.

Please go to www.EnvironmentColorado.org to learn more about how you can keep up the fight with us in 2016.
